TOPIC 6.3
Cities and Globalization

World Cities

- **World City:** (or global city) a city that is a control center of the global economy, in which major decisions are made about the world's commercial networks and financial markets.

- Cities became centers of trade and seats of power for colonizing nations.

- **Ex.** Paris, Singapore, Tokyo, Hong Kong, Los Angeles, Sydney, etc.

	Definition	Examples
Rank-Size Rule	A pattern of settlements in a country, such that the nth largest settlement is 1/n the population of the largest settlement. Most developed nations follow this rule unless they have a primate city.	City 1: 12/1 = 12 million City 2: 12/2 = 6 million City 3: 12/3 = 4 million City 4: 12/4 = 3 million City 5: 12/ 5 = 2.4 million
Primate City	The largest settlement in a country, must have MORE than 2x the people than the second ranking city. It should be disproportionately large and a leader in national capacity and expressions. Good Examples: Paris, London, Cairo	1) London = 7,172,091 2) Birmingham = 970,892 3) Leeds = 715,404 4) Glasgow = 577,869 5) Sheffield = 512,879

Today's Assignment

- **Complete the Rank-Size Rule vs. Primate City Assignment**
  - **Use the link to research the population of each country**
